

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Arthur C. Stark, who was killed at Ladysmith just after passing the sheets of the first volume through the press, as stated in our review of Volume I (Auk, XVII, April, 1900, pp. 189, 190). Mr. Sclater states: "The manuscript of this volume was found partly stored at Durban and partly along with the author's papers in Ladysmith, and by the desire of his executors has been entrusted to me for completion and publication. A good deal of revision and addition has been necessary to complete this volume, which I trust may be found as satisfactory as the first, for which Dr. Stark was alone responsible." Mr. Sclater further says: "It is my wish and hope to be able, with the help of Dr. Stark's note-books and papers, to prepare, very shortly, the two final volumes on South African birds necessary to complete this work." This is a very pleasant assurance, as this work, when completed, will form a most useful hand-book of South African ornithology. The two volumes on the Mammals, also by Mr. Sclater, have already been issued, and form a most welcome and valuable contribution to the series of volumes forming 'The Fauna of South Africa,' of which Mr. Sclater is the editor and Mr. R. H. Porter the enterprising publisher.

In scope and method of treatment the present volume compares favorably with the first, already described at some length in this journal (*l. c.*); the numerous illustrations, prepared especially for this work by Mr. H. Grönvold, are satisfactory and well chosen.

The present volume covers the Passerine families Laniidæ, Crateropodidæ, Turdidæ, Muscicapidæ, Dicruridæ, Campophagidæ, Hirundinidæ, and Pittidæ, and treats of 199 species—Nos. 183–381. In addition to the text cuts illustrating structural details are several half-tone illustrations of birds with their nests.

The nomenclature is conservative, and not quite up to date, if we take Dr. Sharpe's 'Hand List of Genera and Species' as the standard, it conforming more nearly with that of the British Museum 'Catalogue of Birds.'—J. A. A.

Nelson on New Birds from Mexico.¹—The new species and subspecies here described were mostly collected by Mr. Nelson and Mr. Goldman during their recent trip to Yucatan, and are as follows: (1) *Crypturus sallei goldmani*, (2) *Crax chapmani*, (3) *Nyctidromus albicollis yucatanensis*, (4) *Attila mexicanus*, (5) *Myiopagis yucatanensis*, (6) *Pachyrhamphus major itzensis*, (7) *Icterus cucullatus duplexus*, (8) *Icterus cucullatus cozumelæ*, (9) *Stelgidopteryx ridgwayi*, (10) *Troglodytes peninsularis*, (11) *Merula plebeia differens*. A new genus, *Nyctagreus*, is proposed, with *Caprimulgus yucatanensis* Hartert as the type.—J. A. A.

¹ Descriptions of a new Genus and eleven new Species and Subspecies of Birds from Mexico. By E. W. Nelson. Proc. Biol. Soc. Washington, Vol. XIV, pp. 169–175. Sept. 25, 1901.
